

# HYDRATACH

## Rotary Brush Cutter Attachments

www.hydra-tach.com

605-653-3247

### Exclusive Features:

#### Direct Drive Radial Piston Motor

Delivers high torque and fast speed recovery

Large visible pressure gauge allows the operator to monitor motor load in real time.

#### Heavy Blade Carrier and Blades

1" thick AR400 blade carrier with double sided 5/8" thick blades

#### Open or Closed Front

The front of the mower features a latch-style door that can be opened to ingest trees and brush or closed for better containment and mulching.

#### Replacement Skid Shoes

The replaceable hardened skid shoes run the length of the mower and extend up the side of the deck. This dual-purpose design allows for replacement of the ground wear surface as well as the side of the mower deck that takes the abuse of flying debris, adding years of service life to the deck of the mower.

### Specifications:

| Model:                 | RBC62                | RBC72                |
|------------------------|----------------------|----------------------|
| Cutting Width          | 62"                  | 72"                  |
| Blade                  | Reversible 5/8" x 6" | Reversible 5/8" x 6" |
| Number of Blades       | 3                    | 3                    |
| Blade Carrier Material | 1" AR400             | 1" AR400             |
| Motor Type             | Radial Piston        | Radial Piston        |
| Hyd Flow               | 30-45 GPM            | 30-45 GPM            |
| Hyd PSI                | 3000-4500            | 3000-4500            |

## Pair with the Hydratach Boom System

Attachments can be connected or changed from the Hydratach boom system in minutes using the standard skid steer coupler.

Attachments connect hydraulically with standard flat face couplers. No wrenches!

Any of the Hydratach skid steer attachments are available to use as boom head options.

In addition, these attachments, and more, can be used with existing high flow skid steers, allowing for better asset utilization. You no longer need to have duplicate attachments for the same tasks.

The universal skid steer coupler at the end of the boom features a three-axis rotator.

The attachment can be easily maneuvered by the operator right from the cab.
